Vision Measuring Systems
QUICK SCOPE QS-L
High-speed image auto focus achieving height measurement now standard equipment. Measurements thus far performed separately using an optical measuring instrument and an indicator are now integrated into one machine.

**Reliable small-parts measurement**

High-speed 7X optical zoom with an interchangeable objective lens unit provides sharp and bright images. Measures details that cannot even be recognized when using digital zoom.

**Highlights hard-to-see edges**

High-intensity 4-quadrant LED ring light generates shadows to highlight edges that otherwise would be practically invisible.
### Problems with simple dimensional measuring devices

<table>
<thead>
<tr>
<th>Problems</th>
<th>QS-L solutions</th>
</tr>

</table>
Generic technology realizes accurate measurement

7X optical zoom unit with interchangeable objective lenses offers reliable small-parts measurement

Newly designed 7X optical zoom unit with interchangeable objective lenses securely captures measurement targets from wide-field to micro form. In addition, 4X digital zoom is available using software.

**View field**

**Horizontal (H)**
- 1X: 13 mm
- 1.5X: 10.08 mm
- 2X: 7.71 mm

**Vertical (V)**
- 1X: 9.84 mm
- 1.5X: 7.57 mm
- 2X: 5.79 mm

**Total magnification (on the monitor)**
- 1X: 19
- 1.5X: 25
- 2X: 29

Note: The total magnification indicates the magnification on the monitor when the QSPAK video window size is the default 252.7 x 214.9 mm.
High-speed image auto focus enables highly accurate height measurement

Since non-contact measurement requires only the minimum clamping of the workpiece, height measurement can be performed efficiently. Also, in contrast with laser-equipped measuring devices, height measurement is less influenced by the surface roughness of the workpiece.

LED light unit offers a high degree of freedom for reliable edge measurement

The view may vary depending on the type of method used for lighting the workpiece. The QS-L can capture edges accurately by switching between transmitted lighting, co-axial lighting and ring lighting.

4-quadrant LED ring light

Co-axial light

Transmitted light

Ring light

The lighting tool offers automatic setting of the ideal light intensity so that constant brightness can be maintained. It also eliminates data dispersion caused by lighting conditions.

Dual-area contrast tool

Brightness tool
Software enables easy operation and reliable measurement

QSPAK

Large screen makes detailed operations easy
All the functions needed for measurement are displayed on one screen; measurement can be performed by simply moving the mouse. Large images enable users to measure details with ease.

Eliminates confusion between results and points
Since measurement result images are displayed, confusing results that can occur with just showing measuring points can be eliminated.

One-click edge detection
Circles, lines and dots around the measurement point can be read out instantly with one-click of the mouse.

Detection tools matched to targets
Detection tools can be selected according to the measuring point in order to capture edges with high accuracy.

User-friendly operation guidance
When a command is selected, an explanation of the corresponding operation method is provided.

Many commands enable fast measurement
A wide choice of commands including various distance and intersection point measurements enables easy and reliable measurement.
Remove influence from breakage and burrs by excluding abnormal points

Erroneous measurement points caused by dust adhering to a workpiece including breakage and burrs are automatically removed. The removal threshold can also be set easily.

Template function

The template function making forms visible is featured for the first time.

Form tolerance is also supported

The auto trace tool enables tracking and acquiring contours on the screen by copying automatically.

Identifies desired measuring points quickly

Measuring points can be quickly found in the graphical window. Operations on measured elements using graphics can also be performed easily.

Totalization of daily measurements can be easily performed

CSV output of measurement results is available so that they can be used for statistical data processing with Excel.

Option

The FORMTRACEPAK-AP optional analysis software can provide advanced dimensional analysis.

Option

In addition

The optional MeasurLink software provides the statistical process control (SPC) control charts, histograms and process capability indexes.

*1: Inspected to Mitutoyo standard. L = measuring length (mm)
*2: 3X lens magnification or greater
*3: 1X and 2X objective lenses are optional

Remote box

- Adjustment knob for co-axial light, transmitted light and ring light intensity
- Emergency stop switch
- Speed adjustment knob
- Data input button
- Zoom switch button
- Auto focus button
- X-Y-Z-axis reset button
- Outer: Jog-shuttle (Z-axis fast feed)
- Inner: Jog dial (Z-axis fine acceleration)

**■ Holder with clamp**

Order No. 176-107

Maximum length of the clamp: 75 mm

**■ V-block with clamp**

Order No. 172-378

Maximum supportable diameter: 25 mm

Center height from the mounting surface: 38 - 48 mm

**■ Swivel center support**

Order No. 172-197

±10° swivel is available, minimum readable angle 1°

Suitable for measurement of screw

* Adapter B (176-310) is separately required for size 2010.
* Adapter B (176-304) is separately required for size 3017 and 4020.

**■ Stage adapter**

Application

Some optional products require this be mounted on the measuring machine.

Note) A set consists of 2 sheets.

**■ Exclusive table**

Order No. 02ATE760

External dimensions: 1800(W)×900(D)×740(H) mm

Mass: 60 kg
Optional software

**FORMTRACEPAK-AP**

Geometrical tolerance, contour degree evaluation and micro dimension analysis can be performed on the basis of the contour data obtained using a quick scope.

**MeasurLink Real-Time Professional**

*MeasurLink Real-Time* is the Statistical Process Control (SPC) software that displays statistical processing results including control charts, histograms and process capability indexes in real-time based on data collected through the quick scope and measuring devices and systems. The software helps prevent generating scrap by tracking dimension variation trends so that early preventive action can be taken when a process is seen to be about to produce product outside the tolerance limits.

**QS-CAD I/F**

- Specifies the current observation point corresponding to stage position information.
- Can extract design information from graphic elements and omit key input during verification.
- Output of measurement results as CAD data is available.

**Measure Report**

This software creates inspection sheets from data collected by measuring devices and systems including the quick scope, using a layout offering a high degree of freedom.
Traceability

Traceability to the national standard of length

• Mitutoyo owns standard scales that are traceable to the national standard of length and these are used to calibrate the reference gages used for calibration of measuring instruments, thus establishing and maintaining traceability for each instrument.

• Our calibration organizations are accredited by IAJapan, a signatory to the Mutual Recognition Arrangement (MRA) of the International Laboratory Accreditation Cooperation (ILAC), and approved of as having measurement skills equivalent to those of overseas organizations.

Reliable support system

The world’s top-level global network

Following the establishment of MTI Corporation (U.S.) in 1963, Mitutoyo has been expanding its market presence throughout the world. Currently, the company has R&D, manufacturing, sales, and engineering service bases in 29 countries, as well as a network of distributors in some 80 countries. Mitutoyo maintains its rock-solid status as a leading global manufacturer providing services tailored to each regional society.
Mitutoyo is not only a manufacturer of top quality measuring products but one that also offers qualified support for the lifetime of the equipment, backed up by comprehensive services that ensure your staff can make the very best use of the investment.

Apart from the basics of calibration and repair, Mitutoyo offers product and metrology training, as well as IT support for the sophisticated software used in modern measuring technology. We can also design, build, test and deliver bespoke measuring solutions and even, if deemed cost-effective, take your critical measurement challenges in-house on a sub-contract basis.

Whatever your challenges are, Mitutoyo supports you from start to finish.
